Art Unit: 1725

1. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In the claim it states the process steps of "fitting a part of the frame members into a mold, wrapping the part of the frame members fitted in said mold in cast metal".

However, it shall be a part of **each** of the frame members which is fitted into a mold and wrapped in cast metal, rather than just a part of the frame members.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over applicants' admitted prior art as set forth in pages 1-2 of the specification and further in view of either Ruehl et al or Leith.

The admitted prior art substantially shows the invention as claimed except that it uses a welding technique instead of molding technique to join the frame members. However, both secondary references show to place frame members inside a mold cavity and then inject molten material around the joining members to join the same. Apparently, the molding technique forms a stronger joint since the molding material provide a greater joining area. In view of the prior art teachings as a whole, it would have been obvious to use the molding technique of the secondary references to join the frame members of the admitted prior art to form a stronger joint.

5. Claim 2 is also rejected under 35 U.S.C. 103(a) as being unpatentable over Ruehl et al.

If the members joined by Ruehl et al are considered to be the frame members, then, it would have been obvious to use the technique of Ruehl et al to join frame members made of any metal, including an aluminum alloy.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
